

XITING RFC Stocktaker

Freeware for analysis of security issues in RFC interfaces

BUSINESS CHALLENGE

State: The interface users in RFC connections for the communication with other systems are authorized extensively (SAP_ALL). Thus SAP users (employees) are able to access or even manipulate protected data – even without explicit access authority.

The security requirements demand a limitation of these authorizations.

Target: You wish to improve the security level of all RFC interfaces to best-practice standards. All interfaces should be checked in order to ensure a secure and controlled end configuration. The application process should proceed without any interference during this process.

Solution: In cooperation with Xiting AG, SAP offers a service for authorization optimization of RFC interfaces. (SAP note 1682316: Optimization of RFC-User authorizations)

Procedure:

- RFC interface users are evaluated
- Incorrect interface users are (if necessary) renamed in accordance with a central naming convention as well as grouped correctly
- Interface users are set up correctly and provisioned with new restricted authorizations

During the process the interface users are monitored constantly in order to ensure that work in the productive environment is not disrupted.

LEARN MORE ABOUT THE RFC STOCKTAKER

Read how Xiting AG cleaned up the RFC interfaces of AUDI AG.

XITING RFC Stocktaker Freeware for analysis of security issues in RFC interfaces

EVALUATION VIA XITING RFC STOCKTAKER

Your benefits:

- Current security situation evaluated by SAP specific software from Xiting AG
- Creation of a report covering the whole system landscape
- Delivery of calculation results for a cost benefit analysis (transparency)
- Delivery of a basis of decision-making
- Simple installation via transport

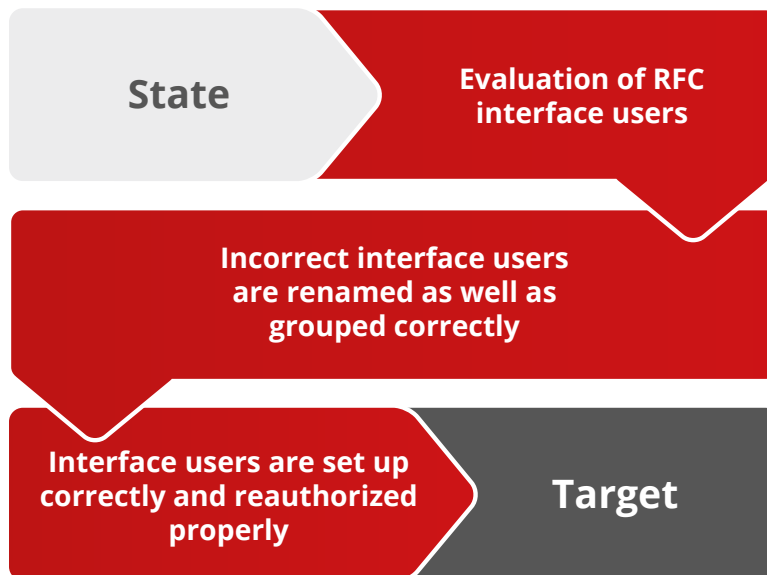

Results:

- Outline of the RFC communications
- Number of RFC interfaces
- Number of user-specific connections
- Number of users to be cleaned up
- Number of created runtime errors

Xiting RFC-Stocktaker

Your benefits at a glance:

- ✓ Freeware
- ✓ Safe usage via API /BAPI
- ✓ Quick results
- ✓ Clean installation
