

XAMS

Xiting Authorizations Management Suite

RUN EFFICIENT AUTHORIZATION PROJECTS

Xiting Authorizations Management Suite (XAMS) is a SAP security solution suite which focuses on role design, maintenance, testing, S/4HANA migration as well as vulnerability scanning of custom ABAP code and the creation & validation of SAP security concepts.

Published auditing standards and legal regulations require companies to impose restrictions on authorizations. This inevitably leads to the regular reworking of existing or the creation of entirely new authorization concepts.

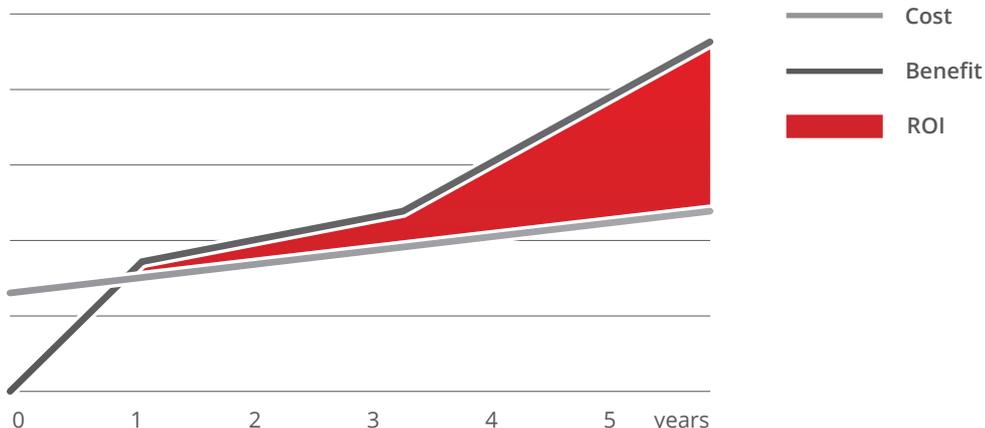

The implementation of authorization projects is a challenge in every respect, requiring a pro-

fessional understanding of the underlying business processes, technical knowledge of the SAP authorization scheme, and a methodical and efficiently-run project.

The Xiting Authorizations Management Suite (XAMS) significantly shortens critical and time-consuming phases in SAP authorization projects and helps to ensure their successful completion.

This solution allows us to offer a best-practice approach for the integral management of SAP authorizations in the ABAP field - the Xiting Authorizations Life-cycle.

Return on investment (ROI) can be reached after just one year!*

* Data is based on the calculation of a major auditing firm and an actual XAMS project.

GOALS

- Analyze existing roles and authorizations for issues, vulnerabilities and S/4HANA compatibility.
- Conveniently create new roles based on trace data to prevent over-authorizing users.
- Maintain roles and authorizations with as little effort as possible.
- Automate testing of new roles with virtually zero effort and without affecting users.
- Reduce risk during go-live and easily restore old roles in case of an emergency.
- Automatically test SAP systems against ready-to-use security concepts.

XAMS Xiting Authorizations Management Suite

SAVE TIME AND MONEY

The Xiting Authorizations Management Suite (XAMS) dramatically simplifies role design, maintenance, testing as well as vulnerability scanning of custom ABAP code and the creation & validation of SAP security concepts. Additionally, the XAMS can dramatically accelerate SAP S/4HANA migration projects.

Xiting Role Designer

■ The Xiting Role Designer enables role administrators to design new roles in a drag-and-drop cockpit virtually and to simulate what-if scenarios through virtual role assignment. Additionally, the Xiting Role Designer can migrate your existing roles to SAP S/4HANA through the push of a button, saving you months of manual labor.

Xiting ABAP Alchemist

■ The Xiting ABAP Alchemist helps you to analyze your custom ABAP code and find potential vulnerabilities, such as missing authority checks. Additionally, it enabled you to optimize your SU24 proposal database for existing authority checks in your custom code.

Xiting Role Builder

■ The Xiting Role Builder dramatically reduces, and in many cases eliminates traditional role testing efforts through a revolutionary concept called Productive Test Simulation (PTS). The Xiting Role Builder works hand-in-hand with Xiting Times to provide its unique testing and reporting features.

Xiting Role Replicator

■ The Xiting Role Replicator reduces the time and effort involved in maintaining organizational fields through mass-replication of roles. Additional reporting features ensure that your roles are never out of sync and always properly maintained.

Xiting Times

■ Xiting Times eliminates the risk during Go-Live caused by potentially missing user authorizations. In the event of authorization errors, end-users can check out their old roles through a self-service mechanism and keep them for a temporary period – similar to other emergency access management (EAM) or Firefighter concepts.

Xiting Role Profiler

■ Xiting Role Profiler speeds up the verification of your role design and checks the quality and robustness of your implemented role concept. Additionally, the Xiting Role Profiler provides over 90 reports that enable you to maintain proper roles and authorizations.

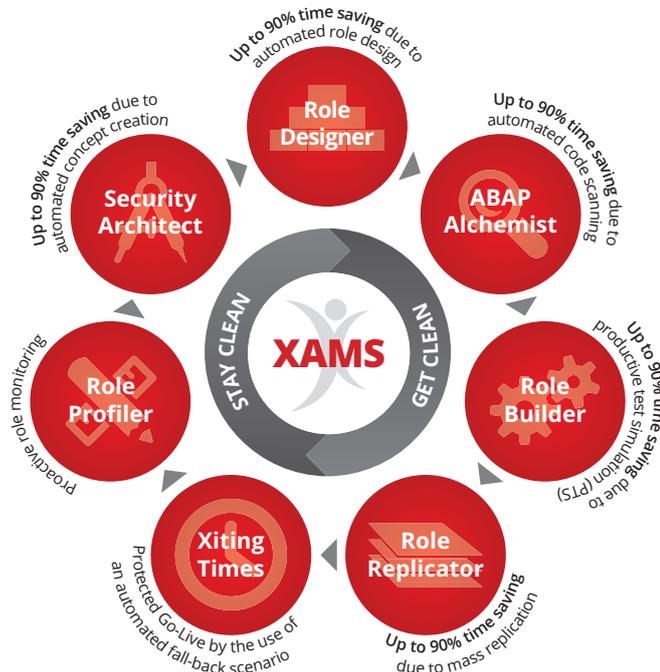

Xiting Security Architect

■ The Xiting Security Architect provides ready-to-use security concepts that Xiting developed together with major auditing firms. Additionally, the Xiting Security Architect can compare your live systems with the provided concepts and report on discrepancies, long before your security audit is due.

XAMS provides a 75% time saving compared to the manual creation and testing of SAP ABAP authorizations and is based on SAP Security Guidelines of the German SAP User Group (DSAG).
