

ERP System Analysis incl. SAP S/4HANA Readiness Check

MAKE YOUR SYSTEM FIT FOR THE FUTURE!

The efficient use of SAP authorizations is a constant challenge for many companies. Due to the high maintenance effort involved and the necessary expertise, proper authorization management is often neglected while the associated consequences and risks of doing so are widely underestimated. This leads to fragmented role concepts that can no longer meet security, transparency and maintainability requirements.

Xiting's ERP System Analysis and SAP S/4HANA Readiness Check leverage the functionalities of the Xiting Authorizations Management Suite (XAMS) that enables the retrieval and analysis of critical information with regard to technical, organizational and procedural complexities. This information enables Xiting to estimate the effort involved to completely redesign the customer's SAP authorization concept. Finally, based on the results obtained, the system analysis will include a recommendation for an overall project approach and the necessary steps involved to complete the project.

Moreover, the system analysis includes an SAP S/4HANA Readiness Check to examine the current role concept regarding technical requirements for a future SAP S/4HANA migration. Consequences, side effects as well as feasibility can

be assessed through this procedure. Existing roles are checked using the XAMS for SAP S/4HANA compatibility. This enables Xiting to show the customer which transactions and roles are affected by the migration of the current role concept and which project steps must be carried out as part of the SAP S/4HANA migration.

The system analysis results are prepared as a catalog of measures and are subject to further discussions. At the end of the engagement, the customer receives a complete project plan and a reliable cost estimate to redesign or migrate the SAP authorization concept to SAP S/4HANA.

OUR PROCEDURE - STEP BY STEP

1. Execution of the system analysis to determine the existing conditions.
2. Evaluation of the results and derivation of measures as well as recommended actions.
3. Cost estimation for relevant work packages for a redesign or SAP S/4HANA migration.
4. Presentation and discussion of the results as well as defining further steps.
